

Modernize visibility and mitigation of external risks with

Impactful Intelligence.

Impactful intelligence is the new framework for accelerating the detection and elimination of known and unknown external cyber risks. With clear visibility on these exposures, you can optimize the processes that mitigate risks and strengthen security.

The threat landscape is expanding. Attack surface alone won't cut it. Threat intelligence on its own just won't do.

Today, security leaders rank their rapidly evolving IT environments and fast-growing businesses as the #1 challenge in implementing an effective security program. Uncovering the attack surface improves visibility on IT assets, but it lacks valuable insights about external threats. Similarly, threat intelligence is only useful when correlated with an organization's digital footprint.

Cyberint fuses threat intelligence with attack surface management and brand protection capabilities, providing superior visibility on all relevant external risks. Continuous discovery of the open, deep & dark web uncovers known and unknown digital risks earlier on the cyber kill chain, enabling a proactive security program that mitigates risks before they can develop.

Impactful Intelligence

Harness the power of impactful intelligence to drive your organization's cybersecurity strategy.

<p>Impactful Collection</p> <ul style="list-style-type: none"> Continuously identify brand and external IT assets. Automated discovery and intelligence collection. Identification of new & up to date sources. 	<p>Impactful Reporting</p> <ul style="list-style-type: none"> Accelerate risk detection and comprehensive reporting. Contextualized insights. Minimize false positives. 	<p>Impactful Remediation</p> <ul style="list-style-type: none"> Automate action and reduce remediation time. Integrate Intelligence into your workflows and tech stack. Impact strategic decisions and behaviors.

Advantages

Focused

Continuous discovery and mitigation of your most relevant known and unknown external risks.

High Fidelity

Cyberint's intelligence team helps sanitize the data and set you and your team on a path to zero false-positives.

End-to-End

Cyberint take actions where and when you need it: from taking down sites to engaging with threat actors

Real Time

Real time intelligence, insights, support, and action.

Maximum Coverage

Prevent, detect, and investigate multiple use- cases such as phishing, fraud, ransomware, and brand abuse.

Maximum Impact

Enrich items in your security stack. Drive strategic cyber security decisions, turning cybersecurity into a business enabler.

Impactful Intelligence use-cases

- Deep & Dark Web Monitoring
- Fraud
- 3rd Party Cyber Risk

- Phishing Attacks
- Social Media Monitoring
- Ransomware & Attackware

- Brand Protection
- Account Takeover
- Data Leakage

About Cyberint

Cyberint's impactful intelligence solution fuses real-time threat intelligence with bespoke attack surface management, providing organizations with extensive integrated visibility into their external risk exposure. Leveraging autonomous discovery of all external-facing assets, coupled with open, deep & dark web intelligence, the solution allows cybersecurity teams to uncover their most relevant known and unknown digital risks - earlier. Global customers, including Fortune 500 leaders across all major market verticals, rely on Cyberint to prevent, detect, investigate, and remediate phishing, fraud, ransomware, brand abuse, data leaks, external vulnerabilities, and more, ensuring continuous external protection from cyber threats.
